

MELLANYL®-PLA sheets information:

Mellanyl is a sheet made from PLA (polylactic acid). PLA is made from corn and sugarcane waste. The sheets have a white gloss on one surface and a matt finish on the other side. The sheets are specially designed for thermoforming.

They can be lasercut, milling, drilling and digital or screen printed. Excellent use for a sustainable P.O.S. or other visual merchandising applications.

We have Mellanyl in stock in the sizes and thicknesses:

2000 x 1200 x 1 mm and 1000 x 600 x 1 mm

2000 x 1200 x 2 mm and 1000 x 600 x 2 mm

Other sizes and thicknesses on request.

Benefits:

- certified as industrially compostable EN-13432
- high heat resistance
- GMO free

Melt temperature: 150-170 graden Celcius

Density: 1,29 g/cm³

Made in the Netherlands
